

# STEP THERAPY & NEUROLOGICAL CARE

## PATIENTS WITH PARKINSON'S DISEASE

can treat debilitating symptoms  
using innovative medications.

tremor

coordination  
challenges

dementia  
or psychosis

difficulty speaking

But step therapy  
requires patients to  
**TRY AND FAIL**  
**INSURER-PREFERRED**  
**MEDICINES**

before patients can  
**ACCESS WHAT**  
**THEIR CLINICIAN**  
**PRESCRIBED.**

Even when  
insurer-preferred  
medications  
**MAY NOT BE**  
**INDICATED FOR**  
**PARKINSON'S.**

## STEP THERAPY

interrupts treatment plans and  
undermines patient-centered care.
