

STEP THERAPY STIFLES ASTHMA PATIENTS

25 MILLION AMERICANS

live with asthma.

Innovation is **expanding their options** for treatment.

INSURERS STAND IN THE WAY, HOWEVER.

Step therapy policies force patients to try, then fail, insurer-preferred treatments before getting approval for those prescribed by providers.

Step therapy delays asthma patients' treatment and causes

UNNECESSARY SUFFERING,

leading to:

Emergency room visits

Hospitalization

Added medical costs

Limits on step therapy can help asthma patients

BREATHE EASIER.
